

Practice 06

03/10/18 19:14

Non linear

ON/OFF

ON/OFF Histeresys

Linear

P

PI

Nothing

Histeresys window (UL and LL)

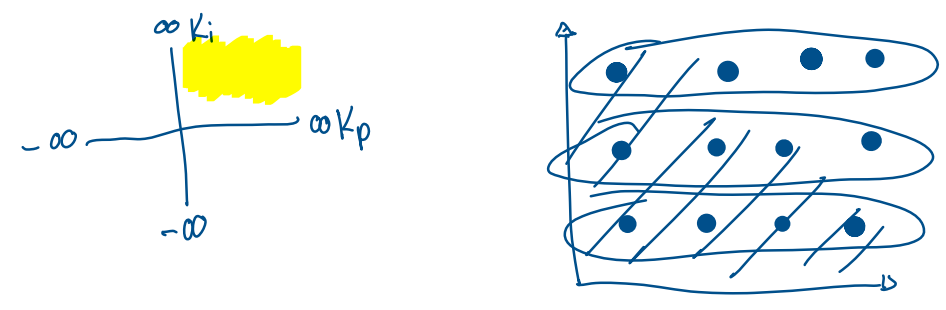

Kp

Kp, Ki

You chose the best window with prueba y error (método empírico)

You get the best Kp by Routh and get an specific value from that range, by

You change both values. By Routh range:

try 5 values

- empirical mode.
- ZN 1
- ZN 2
- Dynamic Asignation

try 4 of the range and 1 random

Get values for Kp and Ki to get the next behavior:
